Statistics and Actuarial Science Seminar

Dr. Patrick Dicker (Royal college of surgeons)

will speak on

Case-cohort analysis of genetic risk factors in a large follow-up study for cardiovascular disease

Fri 10th November 2006 at 4:00PM

Location: Mathematical Sciences Teaching Room

MORGAM is a European prospective study of risk and genetics of cardiovascular disease (CAVD) in over 30,000 people. Platelets are known to have a role in cardiovascular disease and genetic variants associated with platelet function, along with risk-factor phenotypes, were assessed for CAVD risk. Genotyping was performed in a case-cohort setting for multiple endpoints and analysed using weighted partial-likelihood (Cox) model and Bayesian full-likelihood

This talk is part of the **Statistics and Actuarial Science** series. For more, see
