Title: Similarity mechanisms and essential spectra

Speaker: D. C. Moore (Nottingham)

Date: Tue 14th April 2015 at 4:00PM

Location:

Abstract: In this talk, I discuss the derivation of an apparently new 'three space' result for the essential spectra of bounded linear operators on complex Banach spaces, and examine some of its consequences for the study of composition operators on some Banach function spaces. If time permits, I may also discuss some examples and open questions.
