Title: Properties of Abel universal functions III: invariance under composition

Speaker: Konstantinos Maronikolakis

Date: Tue 7th November 2023 at 3:00PM

Location: E0.32 (beside Pi restaurant)

Abstract: A holomorphic function on the unit disc \mathbb{D} is called Abel universal if the family of its dilates is dense in the space of continuous functions on K , for any proper compact subset K of the unit circle. It has been recently shown that the class of Abel universal functions is residual in the space of holomorphic functions on \mathbb{D} . In this talk, I will discuss the invariance of this class under composition from the right and from the left, and give an application to algebrability. (Joint work with Stéphane Charpentier and Myrto Manolaki)
