Analysis Seminar

Title: Contracting sequences of inner functions

Speaker: Vasiliki Evdoridou (Open University)

Date: Tue 25th March 2025 at 2:00PM

Location: E0.32 (beside Pi restaurant)

Abstract: In the setting of iteration of inner functions, Aaronson and also Doering and Mane gave a remarkable dichotomy about the behaviour of the boundary extension. They showed that this behaviour is of one of two entirely different types, depending on the size of the sequence $(-|f^n(0)|). We will discuss the two parts of this dichotomy in the setting of forwa$
