Algebra and Number Theory Seminar

Dr Shane O'Rourke (CIT)

will speak on

Affine length functions and actions on non-archimedean trees

Mon 22nd February 2010 at 4:00PM

Location: Mathematical Sciences Seminar Room

We attempt to unify the theories of (1) isometric actions on Lambda-trees (where Lambda is a linearly ordered abelian group), and particularly based length functions associated with such actions; and (2) affine actions on R-trees, as studied by I. Lioussé.

While much of these theories can be carried over to this new setting, we will describe some of the interesting examples of groups that have (fixed-point) free affine actions, but which do not admit actions as in (1) or (2) above.

This talk is part of the **Algebra and Number Theory** series. For more, see
