UCD School of Mathematical Sciences 2009

Special Public Seminar
Friday, June 12th at 3.30 pm
Room Q004, Quinn Building, UCD

“Distributions in Number Theory”

Professor Nigel Boston
(Stokes Professor, UCD)

Abstract: *It is said that the prime numbers are random but we do not know what random means. There are many such objects in number theory we would love to understand better but that behave as if random. In this talk, I shall describe how researchers have sought to tame and conquer this “randomness”.*

All are welcome
